

Advanced Procedural Programming Laboratory

Lab 1

Write a program that reads a file called DailySales.txt. This file holds all the daily sales for the following the departments of a general store:

1. Hardware
2. Grocery
3. Drapery

The file can have any number of entries – depending on the number of sales on a given day. The following is an example of the format of DailySales.txt:

```
Hardware 100
Grocery 10
Grocery 55
Drapery 200
Grocery 5
```

The program should then display the following:

- Total Daily Sales for the shop
- Average Daily Sales per department
- Maximum Sales per department

You should submit your code and a sample of the input and output in a single MS Word file to moddle.

Deadline: 1st February 2018 at 9pm
